Selected work: arewageek.com

SKILLS & TECHNOLOGIES

Languages:

Typescript, Javascript, PHP, Solidity, Tact, Go, Python

Frontend:

React, Next.js, Livewire

Backend:

Laravel, Hono, Express.js, FastAPI, Flask, Gin

Infrastructure:

Ubuntu, Docker, SQL, Prisma, Drizzle

Architecture:

Modular Monoliths, Microservices

WORK EXPERIENCE

Dawih Solutions | Frontend Engineer

July 2026 – Present | Remote

React, Tailwind CSS

Supacash

July 2026 - Present

- Worked on Supacash, a fintech platform serving over 20,000 users, where I led the expansion of the product from mobile to web.
- Worked closely with engineering teams to translate business requirements into production-ready solutions.

- Build and improve reusable frontend components while optimizing application performance, maintainability, and responsiveness.

Ignition 633 Ministries LLC | Fullstack Engineer

January 2025 – Present | Hybrid

Laravel, Livewire, MySQL

Built modular applications and shared platform services across multiple products, focusing on scalability, maintainability, and long-term reliability. Collaborate across engineering teams to deliver reliable software while mentoring interns and supporting their technical growth

Witness It

July 2025 - Present

- Led the engineering team, coordinating development efforts and driving feature delivery across the platform.
- Built a reusable real-time notifications module that has since been adopted across multiple applications.
- Contributed to the implementation of transaction workflows, evidence management, identity verification, and consensus-driven approval processes.
- Collaborated closely with the product manager, client, and engineering team to define requirements, align on priorities, and deliver platform features

MailForce

March - July 2025

- Contributed to the development of MailForce, a multi-tenant donor management platform that has processed over \$1M in donations.
- Delivered new features across multiple modules while improving platform reliability and usability.
- Maintained and enhanced existing functionality by addressing bugs, improving usability, and supporting evolving business requirements.

Benue Infopedia

May 2026 - Present

- Led the implementation of the platform's payment integration, enabling users to make payments seamlessly within the application.

- Collaborated in the development of a hyper-local news platform and CMS serving journalists, editors, and readers across Benue State.
- Contributed to the advertisement workflow, building features that allow businesses and individuals to create, manage, and promote advertising campaigns on the platform.

Go Viral Africa | Frontend Engineer

August – December 2025 | Remote

TypeScript, Next.js, Tailwind CSS

WhoScore

August – December 2025

- Led the development of the desktop experience, expanding the platform from a mobile-only interface to a fully responsive web application.
- Led the end-to-end implementation of the search experience, including search, trending content, highlights, and search results.

Monei

October – December 2025

- Built the internal admin dashboard used to manage platform operations
- Collaborated with product and engineering teams to deliver new features while improving usability, performance, and maintainability.

Flaury | Backend Engineer

October – December 2024 | Remote

Express.js, Mongo DB, Firebase

Built scalable backend services and APIs that power the platform's core features, with a focus on reliability, performance, and maintainability.

- Led the development of the platform's in-app messaging and notification services, enabling reliable real-time communication between users
- Built RESTful APIs consumed by both the web and mobile applications.
- Collaborated with a fully remote engineering team to deliver features and continuously improve the platform

The Open Labs (TOL) | Fullstack Engineer

August – November 2024 | Remote

Next.js, Mongo DB, Tact

Built a blockchain-powered freelance platform on the TON ecosystem, developing decentralized applications that combine smart contracts with engaging user experiences across web and Telegram.

- Built the core freelance platform, integrating TON blockchain to enable secure and decentralized user interactions.
- Designed the waitlist and NFT minting platform, delivering a seamless onboarding experience for early users.
- Developed a Telegram Mini App and integrated Telegram Bot to streamline user engagement and platform interactions
- Introduced a community quest dashboard with social tasks and reward mechanisms to drive user participation and campaign growth.
- Developed a tap-to-earn Telegram Mini App featuring an in-app marketplace where users could spend earned tokens to boost Points Per Hour (PPH) and increase engagement

Phlamingos NFT | Fullstack Engineer

May – July 2024 | Remote (Fiverr)

Solidity, Next.js, PostgreSQL

Built decentralized applications and smart contracts on Ethereum, focusing on NFT infrastructure, auctions, and on-chain asset creation.

- Developed an NFT auction protocol and decentralized application, enabling secure and transparent on-chain bidding.
- Built a web application for inscribing NFTs on Ethereum (Ethscriptions), simplifying the process of creating and managing on-chain digital assets.

ITS, FUT Minna | Fullstack Engineer

September 2023 – February 2024 | Minna, Niger State

Laravel, React, SQL

Contributed to the development of internal tools and web applications while collaborating with the MIS engineering team.

- Collaborated with the MIS engineering team to develop and maintain internal web applications.
- Built an intern management system used to streamline onboarding and administration.

Skytech Integrated Network Ltd. | Fullstack Engineer & Tutor

June 2022 – July 2023 | Karu, Nasarawa State

PHP, Laravel, SQL, React

Developed custom web applications for the organization and its clients while mentoring interns and supporting their growth in modern web development.

- Built a point-of-sale (POS) system for cybercafés, enabling sales tracking, inventory management, payroll processing, and business reporting.
- Developed a custom news portal with content management capabilities.
- Built a custom web application for a law firm to support its operational workflows.
- Led the onboarding of new interns, providing technical guidance and mentoring in JavaScript, PHP, and modern web development practices.

Borbbles | Co-Founder

September 2021 – March 2022 | Minna, Niger State

PHP, MySQL, jQuery

Co-founded a subscription-based laundry service, combining technology with operational processes to simplify laundry management for students.

- Co-founded the business and led the development of its web application, improving customer experience and operational efficiency.

- Built a subscription management system to support recurring payments and customer plans.
- Worked directly with customers to onboard users, gather feedback, and continuously improve the product experience.

VOLUNTEER ROLES

NAEEES | Tech Support

June 2024 and March 2025 | Minna, Niger State

Express JS, MySQL

- Contributed to the development of an electronic voting platform used to conduct elections for the ***Nigerian Association of Electrical Electronics Engineers*** at the Federal University of Technology, Minna, Niger State.
- Provided technical support throughout the election cycle, ensuring smooth deployment and operation of the platform.
